MTEch Users Conference

September 20th-22nd, 2022
MTEch Users Conference

Matthew Hicks

Regional Manager, Precision Farming

BRIDGING THE GAP

Bridging the gap between the farm and the end user

- Important to know both sides to understand the full picture
- Kelly discussed how we get the data to the end user
- Retrieving data from the farm

Starting the journey

- IoT
- IoT was coined in 1999
- IoT has been a buzz word over the past decade
- Becoming more popular because of advancements in technology
- Promises to make life easier because everything is connected

What is IoT?

- Internet of things
- Which is a network of physical things
- These “things” share information over the internet
- The “things” do most of the work without human intervention

Using IoT every day

September 20th-22nd, 2022
MTECH Users Conference

The coke machine at Carnegie Mellon CS department

- The programmers spent a large amount of time in the lab
- When they needed caffeine, most of the time their long walks to the coke machine were met with hot coke
- In 1982, they decided to install micro-switches in the machine to determine number of cokes and at what temperature
- This IoT device ensured that people didn't walk across campus for a hot coke

Importance of IoT

- The possibilities are becoming seemingly endless because:
 - Cheaper sensors
 - Connectivity
 - AI and machine learning
- People are using IoT throughout their life to make everyday tasks simpler
- Understanding the power of data

September 20th-22nd, 2022
MTech Users Conference

How other industries are using this information?

- Customers sharing information with the company can help produce better products
- Companies can be more efficient, productive and competitive
- Analyze data to develop strategic plans
- Becoming predictive instead of reactive

September 20th-22nd, 2022
MTech Users Conference

How is the ag industry using this information?

- Predicting bird weights
 - Certain customers want a specific weight
 - Helping manage variation coming into processing plant
- Scheduling feed delivery
 - Using bin scales for more accurate feed delivery
- Environmental data
 - Determining the cause of certain events

September 20th-22nd, 2022
MTech Users Conference

What is currently done in the field?

- Things are recorded manually by service techs/advisors and manually keyed into a database
- Manual increases the chance of error
- Feed inventory
 - Climbing feed bins (safety hazard)
 - Throwing a rock at the bins

September 20th-22nd, 2022
MTech Users Conference

The change

- Limit manual processes
- Using Sonar
 - Having everything at your fingertips
- Using IoT to plan farm visits
- Discuss issues and benefits at broiler meetings
- Determine more effective equipment
- Increase overall efficiency

September 20th-22nd, 2022
MTech Users Conference

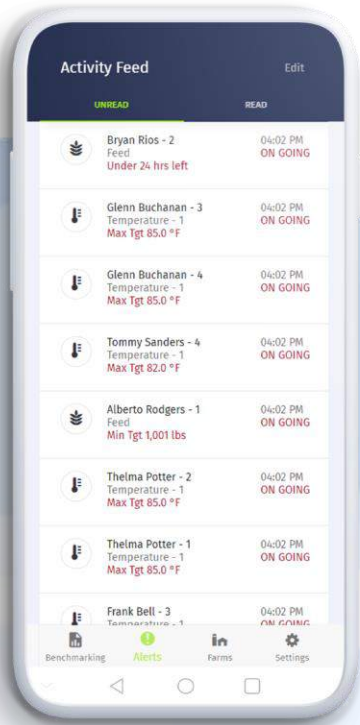

Clean data

- Ideal for data to flow directly from the farm
- Use IoT hardware to collect data
- Ensure the hardware works properly
- Transfer data to the cloud
- The data can be cleansed before flowing into an analysis application
- Trash in = trash out

September 20th-22nd, 2022
MTech Users Conference

Sonar IoT – connect your farm

Silo Scales

Sensor suite

- Temperature (indoor/outdoor)
- Humidity
- Water
- Feed Bins
- Bird Weight
- Air Flow/CFM & Static Pressure
- CO2
- Ammonia
- Lighting
- Egg Counters

September 20th-22nd, 2022
MTech Users Conference

Focus on 5 kpi's

- Temperature (indoor)
- Humidity
- Water consumption
- Bird weight
- Feed weight

From the sensors to the cloud

- Different options:
 - 3rd party controller
 - Wired solution
 - Wireless solution
- The options communicate directly with the cloud or use a communicator
- The data flows through payloads and is stored for further use

3rd party Environmental controller

- 3rd party controllers complete several tasks including collecting data
- The data collected can be transferred to the cloud via a communicator
- Some older controllers lack the technology to transfer data and need to be upgraded
- Sonar is controller agnostic

3rd party controller solution: Key information

- Extra hardware investment
 - Communicator
 - Bin scales
 - Bird scales
- Collects more climate/production data
- Multipurpose unit
- Needs API to retrieve data for the cloud
- Easy solution when using Rotem controllers

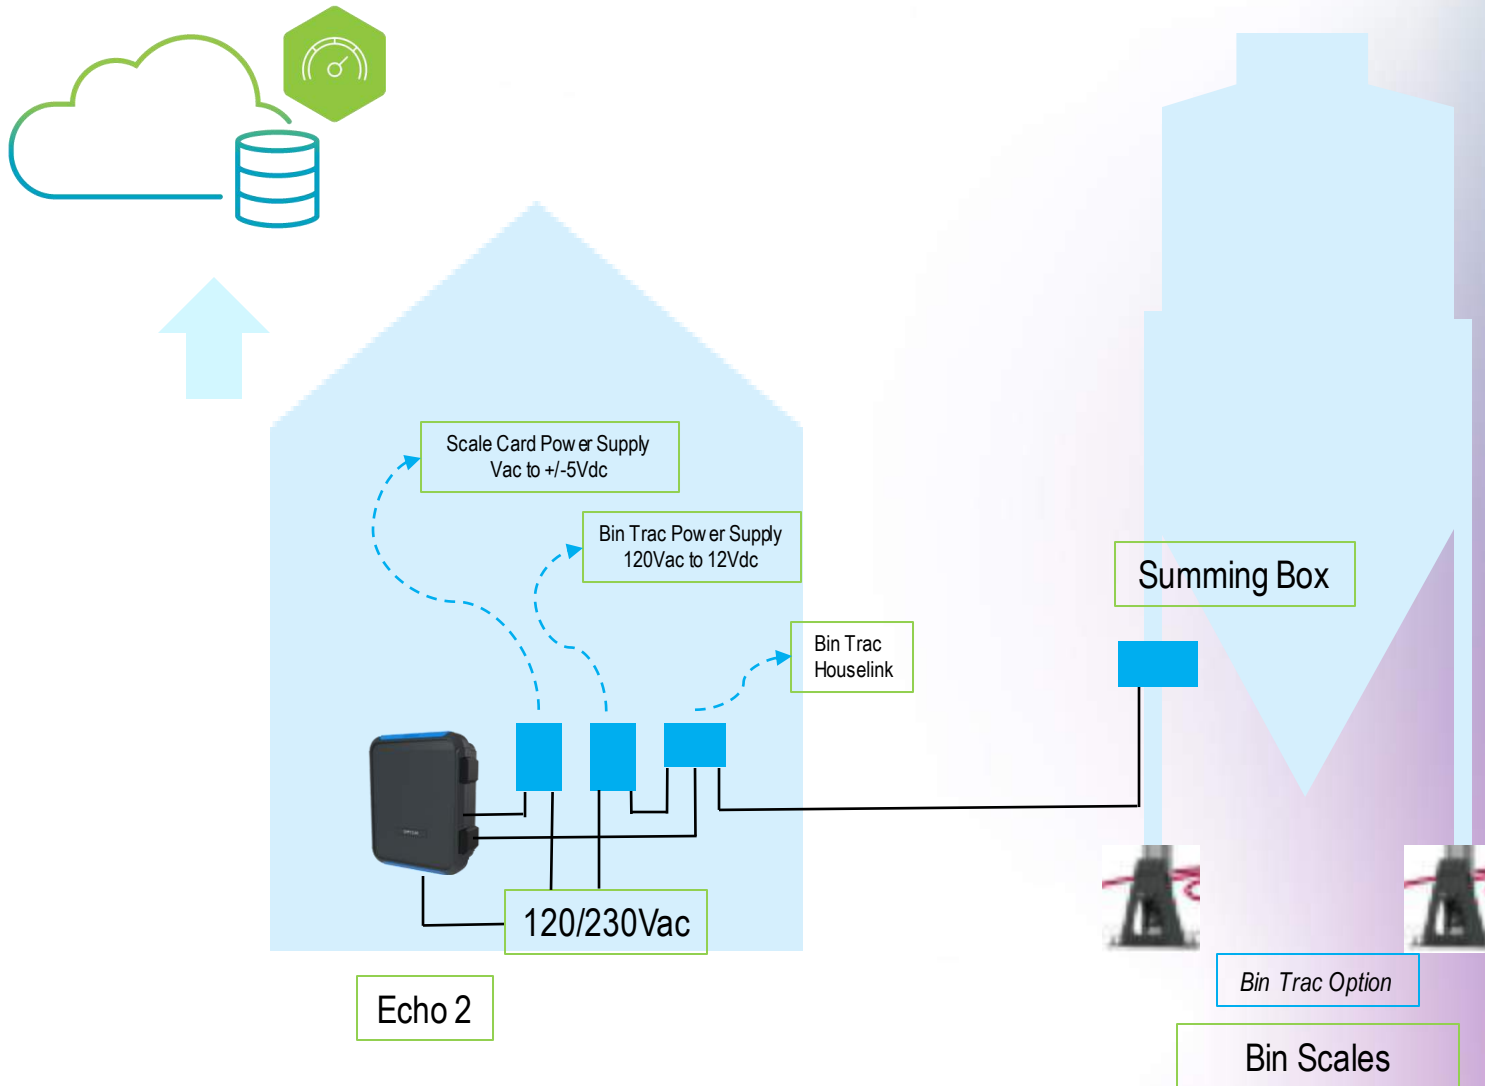

Echo2

- Wired solution
 - All sensors are connected to the Echo2 via wires
- Stand alone product that communicates directly to the cloud
- Designed by Rotem

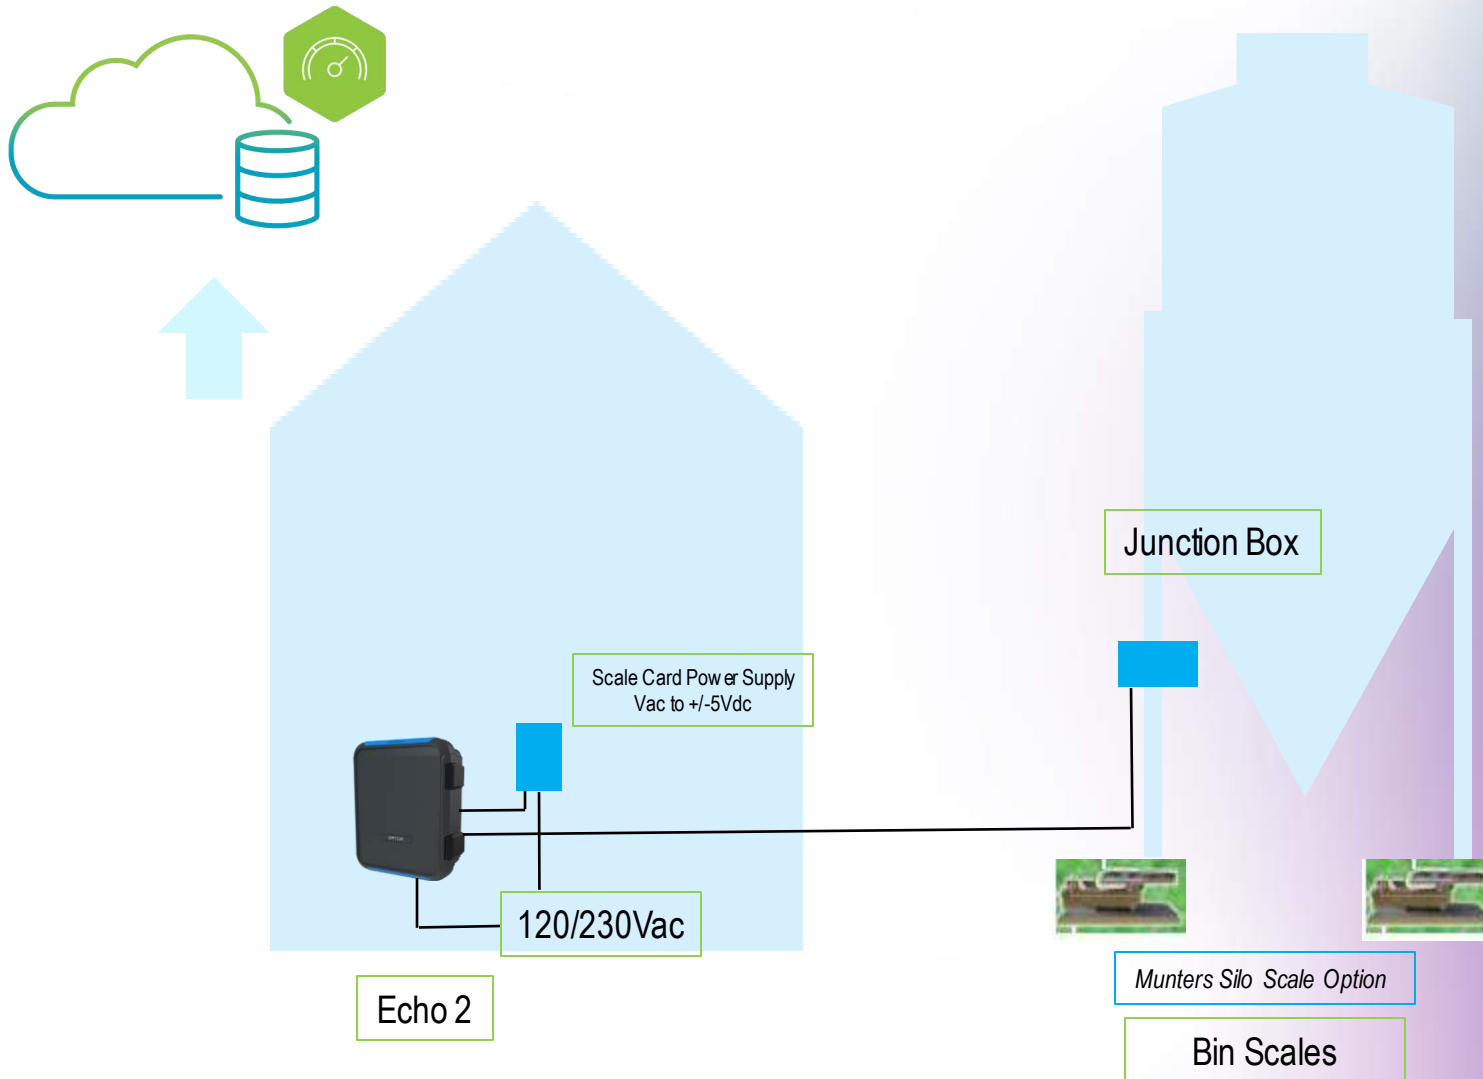

Echo 2 BinTrac Bin Scale Installation Overview

September 20th-22nd, 2022
MTech Users Conference

Echo 2 Munters Bin Scale Installation Overview

September 20th-22nd, 2022
MTech Users Conference

Wired solution: Key information

- Sends data every 15 minutes for all parameters
- All telemetry data is sent through Sonar API
- Silo scales ordered separately, allowing Silo scale equipment to match house/farm/site needs
- Silo scale has high accuracy for feed weighing
- Higher cost of installation
- Customer needs to purchase SIM card or use LAN connection

BarnTalk

- Wireless solution
 - All sensors are wireless
- Partnership with BarnTools
- A BarnTools representative will speak more about this after the break

September 20th-22nd, 2022
MTech Users Conference

Wireless solution: Key information

- Multi-carrier sim card included
- Simple setup and configuration
- Established API for simple data transfer to Sonar
- Multipurpose platform

September 20th-22nd, 2022
MTECH Users Conference

How we gather data with Sonar

1. Connect and Collect

Deploy multiple sensors to capture real-time data

2. Securely Transmit

Send information from the farm to the MTech Cloud

3. Analyze and Act

Access performance analytics and Machine Learning to improve your production

BREEDER - GROWOUT - FEED - WORKSPACE

Historical Flocks By Farm

Farm: EAT MORE BEEF

Average Age	Average Weight	Average FCR	Average % Depletion
52	6.84 lbs	1.342	4.46

FLOCK DATA

Flock ID	Age (days)	Performance %	Broken Egg	Percent Depletion
12672225	53		0	4
12673170	54		0	0
12615092	50		0	6
12657594	51		0	9
12612097	54		05,070	4
12506820	53		56,361	4

Boost projections with Sonar

MTech Users Conference

Precision Farming

Connecting all players in the production supply chain

AUTOMATED DATA COLLECTION

- IoT solution to connect broiler houses.
- Key data points: Feed, body weight, temperature, humidity, water consumption.
- Data is transmitted every 15 minutes from each house.
- More than 5000 daily data points per house.

ARTIFICIAL INTELLIGENCE

Data is submitted into MTech's IoT hub where the cleansing process utilizes MTech's exclusive ML/RL models.

SMART PROTEIN PRODUCTION MANAGEMENT SYSTEM

- All the data from pullets to broilers at the plant is managed.
- One single data point with a centralized Database.

THE REVOLUTION OF SUPPLY CHAIN PLANNING

- Utilizing Artificial Intelligence, the planning hits accuracies never seen before.
- Planning from pullet placements to broiler weights at the plant.

AXIS BI

All data is exposed in advanced and dynamic dashboards utilizing DAR concept.

Full circle

- Understanding the importance of IoT and data
- Using data to be proactive and then predictive
- Connecting all aspects of production
- Bridges the gap

September 20th-22nd, 2022
MTech Users Conference
